Acción Cultural Española publica su cuarta edición del Anuario AC/E de Cultura Digital siguiendo una línea editorial que se propone difundir, entre los profesionales del sector cultural, las principales tendencias digitales a tener en cuenta en los próximos años. Desde 2015, un comité nos asesora en la selección de temas y autores para la primera parte del Anuario. En esta edición, este grupo de expertos ha analizado temas como la curación de contenidos para hacer frente a la sobreinformación digital; la neurociencia aplicada a la tecnología; los últimos avances en inteligencia artificial, el Internet de las cosas y el Big Data aplicados a la cultura; o el uso de la tecnología digital en la música. En cada edición se realiza un estudio de campo, el Focus, que recoge, tanto a nivel nacional como internacional, las buenas prácticas en materia de tecnología digital en una disciplina concreta. Nuestra primera edición centró su atención en el impacto de lo digital en el mundo de las artes escénicas, la segunda, en el ámbito de los museos, mientras la tercera recogía el empleo de recursos digitales en cincuenta festivales culturales nacionales e internacionales. Esta cuarta edición profundiza en la utilización de tecnología digital para conservar, analizar y difundir nuestro patrimonio cultural. Un sector que se encuentra en un momento de gran crecimiento, lo que está llevando a una radical transformación de metodologías y formatos que su autor, David Ruiz Torres, ha recogido en un exhaustivo análisis.

A practical look at extending the value of Building Information Modeling (BIM) into facility management—from the world's largest international association for professional facility managers. Building owners and facility managers are discovering that Building Information Modeling (BIM) models of buildings are deep reservoirs of information that can provide valuable spatial and mechanical details on every aspect of a property. When used appropriately, this data can improve performance and save time, effort, and money in running and maintaining the building during its life cycle. It can also provide information for future modifications. For instance, a BIM could reveal everything from the manufacturer of a light fixture to its energy usage to maintenance instructions. BIM for Facility Managers explains how BIM can be linked to facility management (FM) systems to achieve very significant life-cycle advantages. It presents guidelines for

using BIM in FM that have been developed by public and private owners such as the GSA. There is an extensive discussion of the legal and contractual issues involved in BIM/FM integration. It describes how COBie can be used to name, capture, and communicate FM-related data to downstream systems. There is also extensive discussion of commercial software tools that can be used to facilitate this integration. This book features six in-depth case studies that illustrate how BIM has been successfully integrated with facility management in real-life projects at: Texas A&M Health Science Center USC School of Cinematic Arts MathWork's new campus Xavier University State of Wisconsin Facilities University of Chicago Library renovation BIM for Facility Managers is an indispensable resource for facility managers, building owners, and developers alike.

La principal pregunta que se realizan los administradores es cómo sus empresas pueden obtener una rentabilidad superior que sea sostenible en el tiempo. Existe abundante evidencia que muestra que una buena estrategia tiene un profundo impacto positivo en los resultados de una organización, y que estrategias mal formuladas promueven resultados empresariales negativos. Por lo mismo, el estudio de la estrategia se ha convertido en un aspecto central tanto en la investigación académica como en los programas docentes que, de una manera u otra, buscan que sus participantes estén mejor preparados para la toma de decisiones. Modelacao Do Fluxo De Informacao No Processo De Construcao
IGI Global

O ambiente econômico tem se configurado como um grande desafio empresarial para manter sua sobrevivência e competitividade. Devido à enorme concorrência, as empresas necessitam elaborar um bom planejamento para dar continuidade às suas atividades e manter o controle de seus processos. Com isso, surge a necessidade de um modelo de gestão adaptável para tentar conter as incertezas do mercado e manter o controle interno de maneira eficiente. Logo, o orçamento empresarial torna-se um meio que possibilita as decisões estratégicas. Todavia, antes desse efeito do orçamento empresarial acontecer, a empresa deve conduzir, sobretudo, seu processo de elaboração do orçamento alinhado com o planejamento estratégico. Desse modo, a elaboração do orçamento deve buscar meios que flexibilizem os possíveis cenários em que a empresa está inserida, assim como determinar a criação de modelos para o acompanhamento financeiro e do desempenho dos envolvidos. Portanto, a melhor forma de possuir um orçamento que esteja alinhado com a realidade da empresa acontece, previamente, no seu processo de elaboração, sendo essa etapa crucial para que o orçamento atenda os objetivos que a empresa almeja alcançar, e produza informações importantes para demonstrar seu desempenho. Dessa forma, a presente pesquisa busca tratar dos aspectos gerais do orçamento e trazer um estudo de caso, em que é evidenciado o processo de elaboração dessa ferramenta gerencial.

This essential book introduces the concept of nD modelling, which takes the theory of computer modelling of the built environment to n dimensions. nD modelling utilizes a decision support tool for systematic assessment and comparison between various design parameters such as cost, accessibility, maintainability, sustainability, crime, energy, whole life costing, acoustics and

scheduling among others. Constructing the Future is a comprehensive book which provides a global perspective on the concept of nD modelling and examines its impact on construction, from development to application. The text offers a critique of competing views that seek to justify (or ignore) the role of nD modelling in the future of construction as well as describing developments in this area which are already happening worldwide. Presenting a thorough critique of competing views as well as providing guidance on best practice, Constructing the Future is a bold, well-grounded and illustrated title introducing construction management professionals and researchers to this exciting new development in the quest for a single building and product model.

You have a new venture in mind. And you've crafted a business plan so detailed it's a work of art. Don't get too attached to it. As John Mullins and Randy Komisar explain in *Getting to Plan B*, new businesses are fraught with uncertainty. To succeed, you must change the plan in real time as the inevitable challenges arise. In fact, studies show that entrepreneurs who stick slavishly to their Plan A stand a greater chance of failing—and that many successful businesses barely resemble their founders' original idea. The authors provide a rigorous process for stress testing your Plan A and determining how to alter it so your business makes money, solves customers' needs, and endures. You'll discover strategies for: -Identifying the leap-of-faith assumptions hidden in your plan -Testing those assumptions and unearthing why the plan might not work -Reconfiguring the five components of your business model—revenue model, gross margin model, operating model, working capital model, and investment model—to create a sounder Plan B. Filled with success stories and cautionary tales, this book offers real cases illustrating the authors' unique process. Whether your idea is for a start-up or a new business unit within your organization, *Getting to Plan B* contains the road map you need to reach success.

Industry analysts are in the business of shaping the technological and economic future. They attempt to 'predict' what will become the next big thing; to spot new emerging trends and paradigms; to decide which hi-tech products will win out over others and to figure out which technology vendors can deliver on their promises. In just a few short years, they have developed a surprising degree of authority over technological innovation. Yet we know very little, if anything about them. This book seeks to explain how this was achieved and on what this authority rests. Who are the experts who increasingly command the attention of vendor and user communities? What is the nature of this new form of technical and business knowledge? How Industry Analysts Shape the Digital Future offers the first book length study into this rarely scrutinized form of business expertise. Contributions to this volume show how, from a small group of mainly North American players which arose in the 1970s, Gartner Inc. has emerged as clear leader of a \$6 billion industry that involves several hundred firms worldwide. Through interviews and observation of Gartner Inc. and other industry analyst firms, the book explores how these firms create their predictions, market classifications and rankings, as well as with how these outputs are assessed and consumed. The book asks why many social scientists have ignored the proliferation of these new forms of management and technical expertise. In some cases scholars have 'deflated' this kind of business acumen, portraying it as arbitrary knowledge whose methods and content do not deserve enquiry. The valuable exception here has been the path-breaking work on the 'performativity' of economic, financial or accounting knowledge. Drawing upon recent performativity arguments, the book argues

the case for a Sociology of Business Knowledge.
