D?at de S?rac (1872-1921) is best known

for his piano music but his compositions included orchestral and vocal works, including opera, cantata and incidental music. Claude Debussy described S?rac's music as "exquisite and rich with ideas." The early works were influenced by Impressionist harmonies, church modes, cyclic techniques, folk-like melodies and Andalusian motives. S?rac's style changed dramatically in 1907 when he left Paris and began to include Catalan elements in his compositions - a transition that has hitherto gone unrecognized. Robert Waters provides a much-needed study of the life and works of S?rac, focusing on the composer's regionalist philosophy. S?rac's engagement with folk music was not a patriotic gesture in the vein of nationalistic composers, but a way of

expressing regional identity within France to counter the restrictive styles sanctioned by the Paris Conservatory. His musical philosophy mirrored larger social and political debates regarding anti-centralist positions on education, politics, art and culture in fin de si?e France. Such debates involved political and social leaders whom S?rac knew and personally admired, including the writer Maurice Barr?and the poet Fr?ric Mistral. The book will appeal to those specializing in French music, European ethnic musics, piano music and French music history.

The most comprehensive reference on Mexico's diverse mammalian fauna. *Mammals of Mexico* is the first reference

book in English on the more than 500 types of mammal species found in the diverse Mexican habitats, which range from the Sonoran Desert to the Chiapas cloud forests. The authoritative species accounts are written by a Who's Who of experts compiled by famed mammalogist and conservationist Gerardo Ceballos. Ten years in the making, *Mammals of Mexico* covers everything from obscure rodents to whales, bats, primates, and wolves. It is thoroughly illustrated with color photographs and meticulous artistic renderings, as well as range maps for each species. Introductory chapters discuss biogeography, conservation, and evolution. The final section of the book illustrates the skulls, jaws, and tracks of Mexico's mammals. This unparalleled

collection of scientific information on, and photographs of, Mexican wildlife belongs on the shelf of every mammalogist, in public and academic libraries, and in the hands of anyone curious about Mexico and its wildlife.

This book provides a comprehensive overview of the use of PET and SPECT in not only classic neurodegenerative disorders but also cerebrovascular disorders, brain tumors, epilepsy, head trauma, coma, sleeping disorders, and inflammatory and infectious diseases of the CNS. The new edition has been revised and updated to reflect recent advances and includes additional chapters, for example on the use of artificial intelligence and machine learning in imaging data analysis, the study of brain connectivity using PET and SPECT images, and the role of PET imaging in modulation of brain

functioning by deep brain stimulation.

The authors are renowned experts whose dedication to the investigation of neurological disorders through nuclear medicine technology has achieved international recognition. Most chapters are written jointly by a clinical neurologist and a nuclear medicine specialist to ensure a multidisciplinary approach. This state of the art compendium will be invaluable for neurologists and radiologists/nuclear medicine specialists and will also be informative for interested general practitioners and geriatricians.

Companion volumes on PET and SPECT in psychiatry and in neurobiological systems complete a trilogy.

Applications of Heat, Mass and Fluid Boundary Layers brings together the latest research on boundary layers where there has been remarkable advancements in recent years. This book highlights relevant concepts and solutions to energy issues and environmental sustainability by combining fundamental theory on

boundary layers with real-world industrial applications from, among others, the thermal, nuclear and chemical industries. The book's editors and their team of expert contributors discuss many core themes, including advanced heat transfer fluids and boundary layer analysis, physics of fluid motion and viscous flow, thermodynamics and transport phenomena, alongside key methods of analysis such as the Merk-Chao-Fagbenle method. This book's multidisciplinary coverage will give engineers, scientists, researchers and graduate students in the areas of heat, mass, fluid flow and transfer a thorough understanding of the technicalities, methods and applications of boundary layers, with a unified approach to

energy, climate change and a sustainable future. Presents up-to-date research on boundary layers with very practical applications across a diverse mix of industries Includes mathematical analysis to provide detailed explanation and clarity Provides solutions to global energy issues and environmental sustainability

Data Poetry is a collection of short computer-generated texts and visual poems that explore the technologies and concepts of the digital world. Jörg Piringer uses concepts that enable smart phones to understand language, that help email programs to filter out spam messages, and that help websites to translate texts: but he tricks them all into creating playful poetry. In Data Poetry, an artificial intelligence explains how it would write a book if it were allowed to, a program learns how to write nonsense proverbs, automatic

translators reveal their gender bias, and internet searches expose the secret wishes of twitter users. The book is at once an artistic and entertaining perspective on the influence of digital language technology and its consequences.

The general theme of MEDICON 2013 is "Research and Development of Technology for Sustainable Healthcare". This decade is being characterized by the appearance and use of emergent technologies under development. This situation has produced a tremendous impact on Medicine and Biology from which it is expected an unparalleled evolution in these disciplines towards

novel concept and practices. The consequence will be a significant improvement in health care and well-fare, i.e. the shift from a reactive medicine to a preventive medicine. This shift implies that the citizen will play an important role in the healthcare delivery process, what requires a comprehensive and personalized assistance. In this context, society will meet emerging media, incorporated to all objects, capable of providing a seamless, adaptive, anticipatory, unobtrusive and pervasive assistance. The challenge will be to remove current barriers related to the lack of knowledge required to produce new opportunities for all the society, while new paradigms are created for this inclusive society to be socially and economically sustainable,

and respectful with the environment. In this way, these proceedings focus on the convergence of biomedical engineering topics ranging from formalized theory through experimental science and technological development to practical clinical applications.

This volume contains the papers selected for presentation at the 12th European Conference on Logics in

Artificial Intelligence, JELIA 2010, which was held in Helsinki, Finland, during September 13–15, 2010. Logics provide a formal basis and key descriptive notation for the study and development of applications and systems in artificial intelligence (AI). With the depth and maturity of formalisms, methodologies, and systems today, such logics are increasingly important. The European Conference on Logics in Artificial Intelligence (or Journées Européennes sur la Logique en Intelligence Artificielle — JELIA) began back in 1988, as a workshop, in response to the need for a European forum for the discussion of emerging work in this field. Since then, JELIA has been organized biennially, with English as the official language, and with proceedings published in Springer's

Lecture Notes in Artificial Intelligence series. In 2010 the conference was organized for the first time in Scandinavia, following previous meetings mainly taking place in Central and Southern Europe. The increasing interest in this forum, its international level with growing participation by researchers worldwide, and the overall technical quality has turned JELIA into a major biennial forum for the discussion of logic-based AI.
