 This book brings together research and theory about 'New Learning', the term we use for new learning outcomes, new kinds of learning processes and new instructional methods that are both wanted by society and stressed in psychological theory in many countries at present. It describes and illustrates the differences as well as the modern versions of the traditional innovative ideas.

"The essence of this book is to capture the nature of current educational practices from a variety of theoretical perspectives. Both teachers and teacher educators provide a lens on better understanding teacher training and learning processes. The mutual interrelations and provision of knowledge between the academia and schools are essential to combine discourses and align positions. Therefore, bringing practice into theory and theory to practice in nowadays teaching is key to offer adapted responses to multiple problems and increasingly diverse contexts. On the other hand, the array of studies from around the world compiled in this volume allow the readership to find commonplaces, draw shared concerns, and define goals. Studying teaching and teacher education across-contexts allow to gauge the pulse of the discipline and identify those issues that enable educators to understand the complexities of teaching and learning. The chapters examine the development of knowledge and understanding of teaching practices, analyze engaging learning environments, the sustainability of learning and teaching practices, and show new practices based on the use of Information and Communication Technologies. The diverse teaching contexts from this compilation of international research are organized according to the following themes: - Teaching professional learning and knowledge; - Teacher beliefs and reflective thinking; - Innovative teacher procedures"--

As the relationship between China and the United States becomes increasingly complex and interdependent, leaders in Beijing and Washington are struggling to establish a solid common foundation on which to expand and deepen bilateral relations. In order to examine the challenges facing U.S.-China relations, the National Bureau of Asian Research (NBR) and the Institute for Global Cooperation and Understanding (iGCU) at Peking University brought together a group of leading experts from China and the United States in Beijing and Honolulu to develop a conceptual foundation for U.S.-China relations into the future, tackling the issues in innovative ways under the banner of U.S.-China Relations in Strategic Domains. The resulting chapters assess U.S.-China relations in the maritime and nuclear sectors as well as in cyberspace and space and through the lens of P2P and mil-to-mil exchanges. Scholars and students in political science and international relations are thus presented with a diagnosis and prognosis of the relations between the two superpowers.

Since I first published *Management of Foreign Exchange Risk* (Lexington Books, 1978), financial innovation-spurred, in part, by exploding volatility in currency prices-has revolutionized the theory and praxis of foreign exchange risk management. Old-fashioned forward contracts have surrendered market share to currency swaps and options as well as to their perpetually multiplying derivatives. Interestingly, forex derivatives now provide a low cost and highly efficient method of transferring risk from the firms that are exposed to risk but which would rather not be (i. e. , risk-hedgers) to those which are not exposed but which in exchange for a fee-would assume some exposure to risk (i. e. , risk bearers). Perhaps more importantly, foreign exchange risk management, which was once a fairly mechanical task confined to the international treasury function, is now permeating global strategic management. Indeed, since the demise of the Bretton Woods system of pegged exchange rates, the cost of forex hedging instruments has fallen so dramatically that firms can readily avail themselves of hedging products which can reduce unwanted risk, thereby potentially gaining a competitive advantage over rivals that do not. Management and Control of Foreign Exchange Risk has grown out of a fundamental revision of my earlier work published almost 20 years ago. In the process, my thinking about risk and its mathematics has greatly benefitted from my association with John Cozzolino and Charles Tapiero.

Like music, art is a universal language. Although looking at works of art is a pleasurable enough experience, to appreciate them fully requires certain skills and knowledge." --Carol Strickland, from the introduction to *The Annotated Mona Lisa: A Crash Course in Art History from Prehistoric to Post-Modern* * This heavily illustrated crash course in art history is revised and updated. This second edition of Carol Strickland's *The Annotated Mona Lisa: A Crash Course in Art History from Prehistoric to Post-Modern* offers an illustrated tutorial of prehistoric to post-modern art from cave paintings to video art installations to digital and Internet media. * Featuring succinct page-length essays, instructive sidebars, and more than 300 photographs, *The Annotated Mona Lisa: A Crash Course in Art History from Prehistoric to Post-Modern* takes art history out of the realm of dreary textbooks, demystifies jargon and theory, and makes art accessible-even at a cursory reading. * From Stonehenge to the Guggenheim and from Holbein to Warhol, more than 25,000 years of art is distilled into five sections covering a little more than 200 pages.
