Predictive Crime Analysis using R Routledge
This is a print on demand edition of a hard to find publication. Between 1980 and the mid-1990s, the number of specialized gang units (SGU) in law enforcement agencies increased substantially. The rise in SGU coincided with the widespread adoption of community policing (CP). This report examined whether CP and SGU are complementary or conflicting approaches. The research approach consisted of field observation of gang personnel in two CP agencies with SGU: Indianapolis, IN, and San Diego, CA. This report describes the specific types of activities engaged in by SGU -- documenting the time expended by SGU personnel on each. The results suggest that SGU can have an important role in modern policing. There is little evidence that SGU conflict with CU in principle or practice.

Crime analysis is both a profession and a set of techniques. The professionals who perform crime analysis, and the techniques they use, are dedicated to helping a police department become more effective through better information. Crime mapping is used by analysts in law enforcement agencies to map, visualize, and analyze crime incident patterns. It is a key component of crime analysis and the CompStat policing strategy. Mapping crime, using Geographic Information Systems (GIS), allows crime analysts to identify crime hot spots, along with other trends and patterns. This book focuses mostly on crime analysis mapping, but includes a discussion of predictive modeling, a special handling of modeling terrorism, and appendices which include a review of probability and statistics and possible board questions. The book is not intended to be all inclusive, nor does it handle the subjects in depth. Rather, it is more of a "survey" of a few crime analysis topics that are dealt with more rigorously by other authors.

This book is for the Ministry of Defence Police constables whose professionalism, dedication and commitment was tested and proved beyond doubt, whilst seconded to the United Nations Interim Administration Mission in Kosovo. After years of relative boredom and the humdrum of repetitive plodding behind

Coulport's protective security fences, John Duncanson, and a selection of his fellow police officers, chose to temporarily rid themselves of the adopted tag 'glorified security guards' by volunteering for a United Nations peacekeeping deployment to Kosovo. Little did they know what waited for them as they stepped onto the tarmac at Pristina airport but they were soon to learn as they had to adapt to living on the same planet, but a totally different world...

Today, law enforcement requires actionable and real-time intelligence; 24 hours a day, seven days a week to help respond

to cases efficiently. When evidence is lacking in a case, law enforcement officers are often times left to rely on eyewitness descriptions. In order to quickly disseminate facial composites to news outlets and social media, law enforcement needs to rely on every tool available; including traditional forensic artists and advanced facial composite software. *Creating Digital Faces for Law Enforcement* provides the proper foundation for obtaining key information needed to create effective facial composites. There are two main methods to create a facial composite, first through traditional forensic art techniques and second by using commercially developed facial composite software. Traditional forensic art has advanced from pen and paper to more enhanced digital tools. This text reviews the development of digital tools used by the forensic artist describing each tool in detail. *Creating Digital Faces for Law Enforcement* is the first text of its kind to address the creation of digital sketches for forensic artists and software-driven sketches for non-artist/technicians. A step-by-step guide addressing the creation of digital, software-driven, sketches for non-artist technicians Includes descriptions supported by both photographs and video demonstrations to assist the reader in better understanding the process Written by an internationally-recognized police sketch artist with over 35 years of experience A companion website page will host author created / narrated videos for reader access

In 2002, armed Hindu mobs attacked Muslims in broad daylight in the west Indian state of Gujarat. The pogrom, which was widely seen over television, left more than one thousand dead. In *Composing Violence* Moyukh Chatterjee examines how highly visible political violence against minorities acts as a catalyst for radical changes in law, public culture, and power. He shows that, far from being quashed through its exposure by activists, media, and politicians, state-sanctioned anti-Muslim violence set the stage for transforming India into a Hindu supremacist state. The state's and civil society's responses to the violence, Chatterjee contends, reveal the constitutive features of modern democracy in which riots and pogroms are techniques to produce a form of society based on a killable minority and a triumphant majority. Focusing on courtroom procedures, police archives, legal activism, and mainstream media coverage, Chatterjee theorizes violence as a form of governance that creates minority

populations. By tracing the composition of anti-Muslim violence and the legal structures that transform that violence into the making of minorities and majorities, Chatterjee demonstrates that violence is intrinsic to liberal democracy.
