[Routing and Switching Essentials v6 Companion Guide](#) Pearson Education 101 Labs - Book Series Experts agree that we retain only 10% of what we read but 90% of what we do. Perhaps this explains why the global pass rate for most IT exams is a ghastly 40%. This is where the 101 Labs book series can help. We are revolutionizing how IT people train for their exams and the real world with our Learn - By - Doing teaching method. 101 Labs' mission is to turn you into an IT expert by doing instead of reading. Using free software and free trials, our experts take you by the hand and walk you through every aspect of the protocols and technologies you will encounter in your IT career. We share our configuration tips and tricks with you as well as how to avoid the common mistakes many novice engineers make, which can quickly become career-ending. 101 Labs - IP Subnetting Subnetting is one of the toughest subjects for IT students and engineers to understand. You have to master binary math, hexadecimal numbering systems and address classes.

You must determine which IP address is in which subnet and which subnet mask will provide you with the requisite number of subnet and hosts-per-subnet. You will often have to do this during a crisis on a live network with your boss, customers and other engineers watching you! Subnetting questions form around 9% of your score in exams such as CompTIA Network+ and the Cisco CCNA. If you work in IT, you will be expected to understand how to subnet and troubleshoot subnetting problems. You will also be expected to be able to allocate IP addressing schemes to various departments in your organization. For job interviews you can expect to be grilled on subnetting problems by senior engineers. 101 Labs - IP Subnetting shows you how to answer any subnetting or network design problem using a simple Cheat Chart. All you need to do is tick the boxes and you get the answer, usually in under 60 seconds. We show you how to subnet IPv6 networks, work out wildcard masks for your firewalls, NAT, routing and access lists. We also show you how to summarize routes for your routing advertisements. All answers and working out are provided.

You finish by drilling 33 exam style questions so by the end of the course, you will be the go-to subnetting expert at work. Please use the free resources at www.101labs.net/resources which will help you with the labs. ** This book is an update to Subnetting Secrets which was first written in 2006 * IP subnetting is a subject you need to master if you want to enjoy a successful career in IT. Unfortunately, it's also one of the hardest to learn: you must understand binary math, hexadecimal, address classes, private addressing, IPv6, and many other topics. Subnetting questions are sure to feature in any IT networking exam you will take, and they can form up to 9% of your final marks. You will be asked to solve subnetting problems in any technical job interview, and of course you must be able to troubleshoot IP addressing issues on live networks. Most IT books and training videos make subnetting difficult to understand, which is why so many avoid studying it. If you want to make it in your IT career, you need a deep understanding of how to subnet as well as a quick and easy method you can use in exams and job interviews. IP Subnetting - From Zero to Guru will give you this and more. Paul Browning created this book after teaching subnetting to thousands of students from

all over the world both in classrooms and via online training. It has quickly become the go-to resource for people who want to learn how to subnet. By the end of this book, you will have a very high level of ability and confidence when it comes to subnetting. In this guide you will learn: Binary math Hexadecimal IP address classes Wildcard masking IPv4 subnetting Easy subnetting (for exams) Route summarization Variable-Length Subnet Masking Classless Inter-Domain Routing Network design addressing IPv6 addressing Subnetting with IPv6 The video course to match this book is hosted at www.howtonetwork.com
