"How to Draw Women's Wear" is a hands-on, actionable guide to fashion drawing for busy fashion professionals who want to develop a highly productive drawing process; for fashion students who are in the process of developing their drawing style; and for clothing designers who want to make illustrations properly interpreted by all team members. The book focuses on drawing by hand (pencil and black marker), demonstrating methods and techniques of illustrating clothing and structural elements of design. Created for visual learners; the book contains virtually no text, only captions. The book includes a collection of fashion drawing templates for main women's wear figure types allowing you to focus on apparel drawing to illustrate clothing the way it is actually designed. Avoid mistakes in clothing design illustration; the book includes a special section with dos and don'ts of garment drawing. The book combines features of a reference book, a visual guide, tutorial, and

template book. Figure templates, garment templates, terminological references, step-by-step drawing demos, sketching examples illustrating a progression of an idea from a sketch to completed illustration: all are parts of the same book. Irina V. Ivanova is a fashion designer by trade, a classically trained visual artist, and an experienced educator. "How to Draw Women's Wear" is the latest book in the Fashion Croquis book series.

Welcome to the world of COST-TO-VALUE ANALYSIS The Apparel industry faces an existential problem. The decisions we make do not lead to the results we expect. The tools we use to make our decisions no longer work. Why do retailers and brands beat up their factories to save pennies when they could instead work together to save dollars? Why do they choose which factories to work with using 10, 20 or even 50 factors, when only one factor is important? Buyers simply need to work with the factory where they make the most money. Why do the factories still believe that low FOB price will save them when in fact success depends on moving from product maker to service provider? Why do factories not recognize that in this new consumer-driven industry, their survival will depend on greater compliance and sustainability? Our industry needs a new tool box. Every decision has a cost and at the same time, every decision should provide added value. This book will ensure that the decisions you make bring lower costs and greater profit.

How to close the gap between strategy and execution Two-thirds of executives say their organizations don't have the capabilities to support their strategy. In Strategy That Works, Paul Leinwand and Cesare Mainardi explain why. They identify conventional business practices that unintentionally create a gap between strategy and execution. And they show how some of the best companies in the world consistently leap ahead of their competitors. Based on new research, the authors reveal five practices for connecting strategy and execution used by highly successful enterprises such as IKEA, Natura, Danaher, Haier, and Lego. These companies:

- Commit to what they do best instead of chasing multiple opportunities
- Build their own unique winning capabilities instead of copying others
- Put their culture to work instead of struggling to change it
- Invest where it matters instead of going lean across the board
- Shape the future instead of reacting to it

Packed with tools you can use for building these five practices into your organization and supported by in-depth profiles of companies that are known for making their strategy work, this is your guide for reconnecting strategy to execution.

While there is pressure (from buyers), inclination (within self to do better) and a heightened aspiration among apparel manufacturers to use Industrial Engineering (IE) like other more industrialized sectors, there is no specific book as such dealing with IE in relation to apparel manufacturing. The existing books that are already written on IE possess academic rigour and generic functions applicable across industries, thus making it difficult for the practitioners to refer and clear discrete doubts related to apparel manufacturing. Undoubtedly, work study is the centrepiece of Industrial Engineering; however apart from work study, industrial engineers in apparel industry are also supposed to perform various other functions like preparing operation breakdown and operation flow chart, selecting machine type and attachment and workaids, planning

machine layout for maximizing unidirectional material movement, optimising inventory and storage space and maintaining workplace health and safety. These are some of the areas that often lack significant attention. This practitioner's handbook is an amalgamation of theory and practices, including steps of implementation and common mistakes. A balanced approach is taken to make it equally meaningful and useful for the academics as well as the industry. A unique section titled "industry practices" is incorporated at the end of each chapter which shares the typical practices, constraints and benefits accrued by the industry, which will give meaningful insight to the readers and help them relate theory with actual practice.
