Mader's Reptile and Amphibian Medicine and Surgery- E-Book Cengage Learning

For a variety of reasons, blue-tongued skinks (*Tiliqua* spp.) are very popular pets among reptile enthusiasts. They're not only beautifully patterned lizards who exhibit a number of unusual adaptations and behaviors, they're also relatively docile lizards, who don't mind interacting with their keepers. But while blue-tongued skinks are usually easy to care for, it is important to learn as much as you can about their biology, way of life and the habitats from which they hail to ensure they thrive in your hands.

A Guide To-- Australian Monitors in Captivity Fox Chapel Publishing

With its enticing and colourful design and its fascinating information, this is a book that children will want to pour over--either at home, in the classroom or on a road trip. This book brings together 55 national parks, selected across all Australian states and territories, and over 120 animals. It is divided into seven sections according to habitat (woodlands and grasslands; forests; rainforests; arid zones; mountains; wetlands and waterways; coasts, oceans and islands), each including a number of national parks and a selection of the fish, reptiles, frogs, birds and mammals that inhabit them. At the end of the book is a section on 'little critters'-beetles, spiders, butterflies, grasshoppers, bugs and so on. Each habitat section opens with photographs of the featured national parks and a description of the habitat. Each animal has its own page, which has a stunning colour photograph of the species, a map of its distribution range, its conservation status and scientific information about the species. The information is divided into the following sections: 'Fast Facts' gives you all the vital statistics, such as size, lifespan and number of young; 'Where Does It Live?' tells you where in Australia you can find the species and provides details about its home; 'What's Its Life Like?' tells you a bit about how the animal moves, behaves, eats and has young; and 'Interesting Info' has

quirky and fascinating facts. This book features a foreword by the Governor-General of Australia, Sir Peter Cosgrove.

Blue-tongues are by far the most popular pet skink which can be hardy captives if they are captive-bred. Many captive-bred pet blue-tongue skinks will become quite friendly and beg to come out when they spot their main care-giver. Captive-bred blue-tongue skinks can be much easier to raise than bearded dragons. Blue-tongue skinks are more tolerant of lower temperatures and have lower ultraviolet-B requirements. They do not require live food and do well on a diet of green leafy produce mixed with fruits, legumes and other vegetables, and an animal protein source. Blue-tongue skinks are very tolerant of handling and become quite tractable as they get larger and eventually become "lap lizards" with regular gentle handling. Blue-tongue skinks are much longer-lived than bearded dragons, often reaching their teens and twenties. This beginners guide provides vital information on the origin, physical attributes, how to buy, temperament, health problems, feeding, and socialization of this wonderful pet.
