Clear is known for his ability to distill complex topics into simple behaviors that can be easily applied to daily life and work. This book contributes to the understanding of the transformative power of incorporating translanguaging, the dynamic language practices of bi/multilingual communities, in the schooling of US Latinx children and youth. It showcases instructional spaces in US education where Latinx children's and youths' translanguaging is at the center of their teaching and learning. By centering racialized Latinx bilingual students, including their knowledge systems and cultural and linguistic practices, it transforms the monolingual-white supremacy ideology of many educational spaces. In so doing, racialized bilingual Latinx subjectivities are

potentially transformed, as students learn to understand processes of colonization and domination that have robbed them of opportunities to use their entire semiotic repertoire in learning. The book makes a strong theoretical contribution to the field, putting decolonial, post-structuralist understandings of language and bilingualism alongside critical race theory and critical pedagogy.

The hidden brain is the voice in our ear when we make the most important decisions in our lives—but we're never aware of it. The hidden brain decides whom we fall in love with and whom we hate. It tells us to vote for the white candidate and convict the dark-skinned defendant, to hire the thin woman but pay her less than the man doing the same job. It can direct us to safety when disaster strikes and move us to extraordinary acts of altruism. But it can also be manipulated to turn an ordinary person into a suicide terrorist or a group of bystanders into a mob. In a series of compulsively readable narratives, Shankar Vedantam journeys through the latest discoveries in neuroscience, psychology, and behavioral science to uncover the darkest corner of our minds and its decisive impact on the choices we make as individuals and as a society. Filled with fascinating characters, dramatic storytelling, and cutting-edge science, this is an engrossing exploration of the secrets our brains keep from us—and how they are revealed.

AN INTRODUCTION TO SOCIOLINGUISTICS The new eighth edition of An Introduction to Sociolinguistics brings this valuable, bestselling textbook up to date with the latest in sociolinguistic research and pedagogy, providing a broad overview of the study of language in social context with accessible coverage of major concepts, theories, methods, issues, and debates within the field. This leading text helps students develop a critical perspective on language in society as they explore the complex connections between societal norms and language use. The eighth edition contains new and updated coverage of such topics as the societal aspects of African American Vernacular English (AAVE), multilingual societies and discourse, gender and sexuality, ideologies and language attitudes, and the social meanings of linguistic forms. Organized in four sections, this text first covers traditional language issues such as the distinction between languages and dialects, identification of regional and social variation within languages, and the role of context in language use and interpretation. Subsequent chapters cover approaches to research in sociolinguistics—variationist sociolinguistics, ethnography, and discourse analytic research—and address both macro- and micro-sociolinguistic aspects of multilingualism in national, transnational, global, and digital contexts. The concluding section of the text looks at language in relation to

gender and sexuality, education, and language planning and policy issues. Featuring examples from a variety of languages and cultures that illustrate topics such as social and regional dialects, multilingualism, and the linguistic construction of identity, this text provides perspectives on both new and foundational research in sociolinguistics and linguistic anthropology. An Introduction to Sociolinguistics, Eighth Edition, remains the ideal textbook for upper-level undergraduate and graduate course in sociolinguistics, language and society, linguistic anthropology, applied and theoretical linguistics, and education. The new edition has also been updated to support classroom application with a range of effective pedagogical tools, including end-of-chapter written exercises and an instructor website, as well as materials to support further learning such as reading suggestions, research ideas, and an updated companion student website containing a searchable glossary, a review guide, additional exercises and examples, and links to online resources.

There is a huge collection of literature relating to death, grief and bereavement, but one aspect that has received relatively little attention is that of death management practices (by which we mean the various ways of managing the circumstances of the death, ritually acknowledging it and sensitively handling the disposal of the body and so on). While ways of disposing of the dead and grief practices have been thought of as based upon individual responses, grief and bereavement practices can be understood not only by looking at psychological and medical frameworks, but also by examining people as part of a complex structure of social arrangements, institutions, structures, and patterns. By examining the social and institutional structures of various groups around the world, we provide an international framework for a better understanding of the study of dying, death, and bereavement. This book highlights the significance of these matters in an international context, reflecting common themes and important differences. It will highlight common themes across diverse cultures and national settings, while also drawing attention to significant differences. If professionals working in the field of death, grief and bereavement are not aware of such differences, their practice can be insensitive, discriminatory and therefore ineffective, if not actually counterproductive. As such, the book provides an invaluable resource for a wide variety of professionals and students, including medicine and health care; social work; counselling and psychotherapy; chaplaincy and pastoral work; and, of course,

those involved in the funeral industry. In addition, students of sociology, psychology and anthropology will find much of interest here in terms of appreciating the diversity of ways in which funerals and other death management practices are managed and integrated into social life.

Because spiritual life and religious participation are widespread human and cultural phenomena, these experiences unsurprisingly find their way into English language arts curriculum, learning, teaching, and teacher education work. Yet many public school literacy teachers and secondary teacher educators feel unsure how to engage religious and spiritual topics and responses in their classrooms. This volume responds to this challenge with an in-depth exploration of diverse experiences and perspectives on Christianity within American education. Authors not only examine how Christianity – the historically dominant religion in American society – shapes language and literacies in schooling and other educational spaces, but they also imagine how these relations might be reconfigured. From curricula to classroom practice, from narratives of teacher education to youth coming-to-faith, chapters vivify how spiritual lives, beliefs, practices, communities, and religious traditions interact with linguistic and literate practices and pedagogies. In relating legacies of Christian language and literacies to urgent issues including White supremacy, sexism and homophobia, and the politics of exclusion, the volume enacts and invites inclusive relational configurations within and across the myriad American Christian sub-cultures coming to bear on English language arts curriculum, teaching, and learning. This courageous collection contributes to an emerging scholarly literature at the intersection of language and literacy teaching and learning, religious literacy, curriculum studies, teacher education, and youth studies. It will speak to teacher educators, scholars, secondary school teachers, and graduate and postgraduate students, among others.

Bilingualism is nowadays a global reality. In Spain, over a million and a half Primary School students follow a bilingual curriculum, which has brought about a change of paradigm with regard to the teaching of English as a foreign language. In fact, alongside and as a result of the MEC-British Council bilingual project of 1996, different parallel initiatives have arisen over the years which have consolidated the gradual implementation of bilingual English-Spanish teaching, as well as the teaching of certain academic content in English through the CLIL (Content and Language Integrated Learning) approach. In view of this reality, this work sheds light on the main linguistic phenomena which require our attention in bilingual educational contexts where there is strong between-language competition. Among them, it is worth highlighting the acquisition of foreign languages and second languages, the cognitive and metacognitive processes present in the bilingual brain, multilingualism, interference and reverse transfer, fossilisation and language attrition. All this knowledge will enable bilingual educators to adapt their teaching strategies to achieve a correct use of English and Spanish, as well as to maximise the acquisition of content in both languages, especially in contexts where the L1 and the L2 are used interchangeably.

The scholarly articles included in this volume represent significant contributions to the fields of formal and descriptive syntax, conversational analysis and speech act theory, as well as

language development and bilingualism. Taken together, these studies adopt a variety of methodological techniques—ranging from grammaticality judgments to corpus-based analysis to experimental approaches—to offer rich insights into different aspects of Ibero-Romance grammar. The volume consists of three parts, organized in accordance with the topics treated in the chapters they comprise. Part I focuses on structural patterns, Part II analyzes pragmatic ones, and Part III investigates the acquisition of linguistic aspects found in the speech of L1, L2 and heritage speakers. The authors address these issues by relying on empirically rooted linguistic approaches to data collection, which are coupled with current theoretical assumptions on the nature of sentence structure, discourse dynamics and language acquisition. The volume will be of interest to anyone researching or studying Hispanic and Ibero-Romance linguistics.

Using a consistent, logical, and step-by-step approach, *MEDICAL TERMINOLOGY: A LIVING LANGUAGE, 5/e* introduces students to the anatomy and physiology of body systems and the corresponding medical terms related to them. For each body system, broad coverage of anatomy, physiology, pathology, diagnostic procedures, treatment procedures, and pharmacology is provided. The author emphasizes both terms built from Latin and Greek word parts, and modern English terms, helping students develop a full working word part vocabulary they can use to interpret any new term. This edition contains many new terms, and has been reorganized for more efficient learning. To eliminate confusion, Word Building tables have been removed from each chapter and the terms have been distributed throughout the pathology, diagnostic procedure, and treatment procedure tables, where they are more immediately relevant to students.
