This book explains the financial appraisal of capital budgeting projects. The coverage extends from the development of basic concepts, principles and techniques to the application of them in increasingly complex and real-world situations. Identification and estimation (including forecasting) of cash flows, project appraisal formulae, and the application of net present value (NPV), internal rate of return (IRR) and other project evaluation criteria are illustrated with a variety of calculation examples. Risk analysis is extensively covered by the use of risk adjusted discount rate, certainty equivalent, sensitivity, simulation and Monte Carlo analysis. The NPV and IRR models are further applied to forestry,

property and international investments. Resource constraints are introduced to the capital budgeting decisions with a variety of worked examples using linear programming technique. All calculations are extensively supported by Excel workbooks on the Web, and each chapter is well reviewed by end of chapter questions.

impossibility, but such is the majesty of South America's Iguazu Falls. The falls lie on the border of Brazil and Argentina and both countries have created national parks around the natural marvel. The falls divide the upper and lower sections of the Iguazu River. The river's course runs over a basaltic plateau or volcanic plain. The falls begin where the lava beneath stopped running. Along the ridge there are many hidden reefs and rocks that divide the river into its many channels and allow for the overall waterfall effect. One of the most famous of the water cataracts is the 'Devil's Throat'. iMinds will tell you the story behind the place with its innovative travel series, transporting the armchair traveller or getting you in the mood for discover on route to your destination. iMinds brings targeted knowledge to your eReading device with short information segments to whet your mental appetite and broaden your mind.
